The SOUND Canvas is not normally recognized as a plug-in in the following host application.

[Windows]

Windows(R) 7 SP1 / Windows(R) 8 / Windows(R) 8.1 / Windows(R) 10

Manufacturer	Model name
MOTU	Digital Performer 9 (32 bit Edition / 64 bit Edition)

* We do not confirm compatible with SOUND Canvas VA other than that above the DAW software. A trial version of SOUND Canvas VA ([Windows](#) / [Mac OS](#)) is available. Use this trial to verify how the plug-in operates in your setup before purchasing it.

* For questions regarding your host application, please contact the vendor of your application.

[Reminders]

- No plugin bridge will enable to run 32bit Soundcanvas VA on 64bit OS/DAW environment.
- The SOUND Canvas VA plug-in must initialize its parameters and read its settings when it loads, so it may take about 15 seconds* to load per plug-in.
Ex) Let's say you are using four SOUND Canvas VA plug-ins on a project file. When you open this file, it will take about one minute to load the plug-ins (15 seconds x 4 plug-ins)*.
* The times indicated here are rough estimates. Actual times may vary depending on your PC's performance and setup.
- Though all of the host applications listed above performed properly in our testing, some of them may not work due to differences in inherent manufacturer design specifications and your operating environment. We cannot guarantee all the operations in these music applications.
