

## Real Time Multi Format Conversion with Audio Embedding to Blu-ray

Use the EDIROL VC-300HD when your input needs are more than just SDI – including DVI-D, DVI-A, and Component. In addition you can also scale to a different frame size including 1080, 720, NTSC, and PAL as well change frame rates (including 24p). For sources other than SDI you can also embed audio into the digital stream and the VC-300HD allows you to delay the audio by fractions of milliseconds or frames to ensure that perfect lip sync.
